Python: Python is a programming language.

Programming -> programs-> set of instructions used to perform a particular operation

Python:1991-Guido Vann Rossum ->ABC ka successor hai python

Python's Installation:

Python Features:
1.Dynamically Typed Programming
2.General Purpose Programming :
Game Dev
Software Dev - Tkinter
Web Development - Django , Flask
Data Science
3.Interpreted Programming

Compiler - which executes the whole program at once
interpreter -which executes line by line

Data Types:
1.number - int, float, complex
2.String
3.boolean
4.None

Data Collection
List , Tuple , Dictionary , Sets,Frozen Sets
